Hausa – ‘Dan Maski ko Darba
Français – Les Pucerons
Scientifique - *Aphis craccivora*

Kaskar Gindin Wake

Dan Maski ko Darba yana rayuwa kwana 6 zuwa kwana 15 kuma yana aihuwa kimanin diya 100. Darba tana kasar tohon wake kuma ana samunta cikin tushe da huren wake. Wake yana iya samu matsala daban- daban saboda Darba, amma akwai wani irin wake wanda ke jimre ma Darba. Ruwan sama yana rage Darba in ana yinsu kai a kai kuma ana iya aiki da maganin gargajiya ko na zamani.

Hausa - kanaan darba
Français – jeunes pucerons
Scientifique - *Aphis craccivora*

Kwari masu taimaka ma wake

Hausa- Mai dashi bakwai ja
Français - Coccinelle
Scientifique – *Cheilomenes sulphurea*

Mai dashi bakwai ja tana daya daga cikin kankanan kwarin da ke taimaka ma wake saboda yana cin Darba.

Kaskar Huren Wake

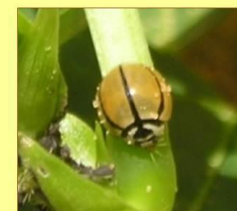

Hausa - Bunsuru
Français – Thrips
Scientifique – *Megalurothrips sjostedti*

Bunsuru yana rayuwa kwana 14 zuwa kwana 18, yana sakin kwai shin ciki hure. Bayan sun girma za su bata huren. Ana iya kashe shi da maganin zamani ko na gargajiya.

Hausa - hangara
Français – Mylabres
Scientifique – *Mylabris senegalensis*

Hangara ita ma tana cin huren wake. A yi hankali in kun shibka wake kusa da massara. Hangara za ta yi barna diwa bisa waken saboda tana zuwa bisa huran massarar . To huren wake yana hitarwa galibi rana guda akwai wuya in kashe Hangara da maganin kashe kwarin wake.

Français – Coccinelle
Hausa-Mai shayi ukku rawaya
Scientifique – *Cheilomenes vicina*

Akwai mai shayi ukku rawaya mai cin Darba. Ita ma tana taimaka ma wake. Ana iya amfani da su dan kashe Darba in ba bu maganin kwarin wake.

Kaska Kwafsar Wake

Hausa – karbobo
Français – Punaise brune
Scientifique – *Clavigralla tomentosicollis*

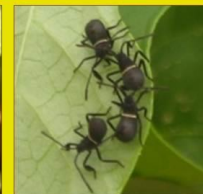

Hausa - yaya
Français –jeunes punaises brunes
Scientifique – *Clavigralla tomentosicollis*

Wannan kwarin masu suna karbobo suna rayuwa kwana 24 zuwa kwana 84. Karbobo yana iya kashe wake cikin kwafsarshi saboda yana shan ruwan wake daga tsanwa kwafsar. Ana iya kashe karbobo da maganin zamani ko na gargajiya.

Hausa – baki karbobo
Français–Punaise noire
Scientifique – *Anoplocnemis curvipes*

Hausa – yayan bakin karbobo
Français – Larves punaise noire
Scientifique – *Anoplocnemis curvipes*

Wanan kwaron mai suna bakin karbobo yana rayuwa kwana 24 zuwa kwana 84. Yana barna kamar kowane karabobo. Diyan shi suna taruwa kasan kunnan wake kuma suna kama da tururuwa. Ana iya kashe shi da maganin zamani ko na galgajiya.

Kaska Hure da Kwafsar Wake

Hausa - Malam Batata
Français - Maruca

Malam Batata ne ke bada wanan tsutsar da ke cin hure da Kwafsa. Yana rayuwa kwana 7 kuma yana sakin har kwai 150 bisa hure da Kwafsar wake.

Hausa- Tsutsar Malam Batata
Français–Larve Maruca

Hausa - tsutsar Malam Batata
Français – Larve Maruca

Ana iya kashe Malam Batata da maganin zamani ko na gargajiya.
